regex

PERSONAL PROJECTS

Job Parser (10/2019 – Present)

- Python script that is able to parse each Ukrainian job search website
- It saves all relevant (according to url list) positions to PostgreSQL database
- It runs headless 24/7 on an AWS EC2 instance
- If new position is found, it sends a message as a Telegram bot
- Also it uses BeautifulSoup, Selenium, Xpra (virtual display)
- It is scalable, thus many users with their own positions wish list can be added
- In plans: Putting it in a docker and deploying it on Amazon Elastic Beanstalk; Building CI/CD infrastructure; Adding "autosubmitting resumes" feature.

ABOUT ME

It worth attention

I have a good technical base, whereas I am one year in IT field. The most interesting thing about me is what I had been doing before I switched to IT. It may seem unbelievable, because normally people don't refuse life I had, but it's all true and I invite you to check it on my youtube channel youtube.com/helloworldtrip. When I was only 22 years old, I achieved I well-paid position in Dubai, UAE as a photographer, having 2 years of experience. I worked in a luxury environment, shooting local high life and world famous celebs. In 2018 I and my wife Olga made our dream come true: we started a trip literally around the world. We hitchhiked it with 2 backpacks (6 months and 30 countries), sometimes we lived in a tent in arbitrary places. This experience taught me to value basic things, to be more brave and openminded, to believe in the goodness of people, to think about our planet and, of course, it broadened our horizons. In the end, my mind was totally free. We came back to Ukraine because it still our country and it is a perfect place for IT specialists. I always knew I have engineering and creative mind. Therefore I believe I can achieve even more heights in this field. My priority is to work in a friendly, productive environment. Maybe startup is my thing. Although "Full stack" mentioned in the title, I consider any jobs according to my interests and skills.
